Automated **urbanFlowGen** pipeline (*urbanFlowGen.sh*)
For each case ID (min to max)
1. Geometry generation
b_{min}, b_{max}, …
Synthetic geometry
(*geometryGenerator.py*)
config.toml
lat, long, …
Real-city geometry
(*geometryGenerator_realCity.py*)
Map data
Output: geometry, metadata
2. Grid generation
RL_{min}, RL_{max}, …
Case files for grid generation
(*gridGenerator.py*)
Submit slurm job
(*grid.sh*)
Output: grid
3. Simulation
Re, τ, ...
Case files for the simulation
(*simGenerator.py*)
Submit slurm job
(*run_gpu.sh*)
Output: flow fields
